

#### ABSTRACT OF DISCLOSURE

A system with a graphical user interface displayed on a display. The graphical user interface may have a first interface element and a second interface element. The first interface element may be automatically reoriented relative to the display in accordance with a change to orientation/location information that corresponds to a change to a spatial orientation/location relative to the display. The second interface element may be allowed to remain in a same orientation relative to the display regardless of or independent of the change to the orientation/location relative to the display. One or more elements may orient to one or more different users.
